2019 Expectations

Ranking Eligibility

Panelists eligible for a 2023 ranking were those who participated in at least one of the four 2023 quarterly surveys AND in all four of the quarterly surveys that comprise a given year's set of expectations data (e.g., to be eligible for a 2023 award pertaining to expectations made in 2020, a panelist would have had to submit forecast data for each of the four quarterly surveys that Pulsenomics conducted in 2020).

Ranking Methodology

The expectations data submitted by eligible panelists for each of the four survey editions in each calendar year were compared to the actual (Q4/Q4) home price percentage changes for the five time horizons that ended in 2023:

Time Horizon	Expectations Vintage(s)
2023 (1 year horizon)	2023
2022-2023 (2 year horizon)	2019, 2020, 2021, 2022
2021-2023 (3 year horizon)	2019, 2020, 2021
2020-2023 (4 year horizon)	2019, 2020
2019-2023 (5 year horizon)	2019

Rankings are based on a comparison of each panelist's expectations for home price changes to the actual change as measured by the applicable benchmark index.*

For each time horizon and expectations vintage, the sum of the absolute differences between (a) each of the four sets of quarterly expectations data submitted by eligible panelists in a calendar year and (b) the actual (Dec/Dec) percentage change in the applicable benchmark data is computed. These sums are then sorted in ascending order to generate rankings (i.e., the lowest sum represents the least average error/highest rank).

*In Q4 2023, the survey benchmark transitioned to the non-seasonally adjusted Fannie Mae Home Price Index (FNM-HPI) from the Zillow U.S. Home Value Index, All Homes, Raw, Mid-Tier (ZHVI). Accordingly, the "blended benchmark" growth rates displayed in the table above were derived from a combination of FNM-HPI growth during Q4 2023 and ZHVI growth for the preceding periods using the historical index data series (as of January 2024) published by each source.
